(E14.)

$$y = \sqrt{3x^2 - 4x + 6}$$

Solution:

$$y = \sqrt{3x^2 - 4x + 6}$$

$$y' = \frac{1}{2\sqrt{3x^2 - 4x + 6}} * (6x - 4)$$

$$= \frac{6x - 4}{2\sqrt{3x^2 - 4x + 6}}$$
